ARTIFICIAL INTELLIGENCE

Szymon Kalkowski

26 stycznia 2022

What is AI?

Artificial intelligence is used by computers and machines to mimic the problem-solving and decision-making capabilities of the human mind.

What is AI?

Artificial intelligence is used by computers and machines to mimic the problem-solving and decision-making capabilities of the human mind.

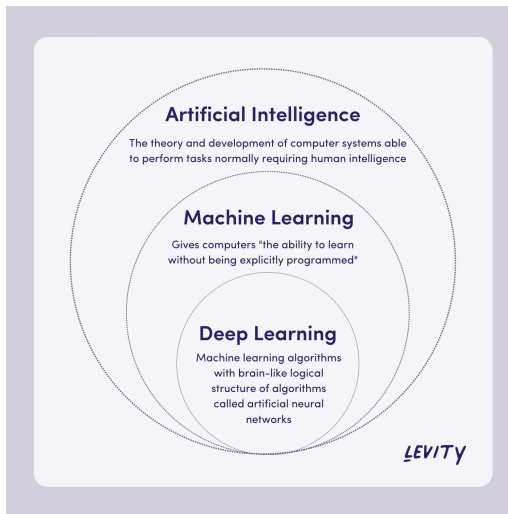

[1]

"It is the science and engineering of making intelligent machines, especially intelligent computer programs. It is related to the similar task of using computers to understand human intelligence, but AI does not have to confine itself to methods that are biologically observable."

John McCarthy [2]

WEAK	STRONG
Weak AI is able to do only some specific tasks for it was created.	Strong AI is similar to human brain. It has abilities to learn and solve new problems.
- Self driving cars - Voice assistants	- Doesn't exist yet

[3]

Examples of artificial intelligence

1. Speech recognition

Examples of artificial intelligence

1. Speech recognition
2. Customer service

Examples of artificial intelligence

1. Speech recognition

3. Computer vision
4. Recommendation engines
5. Automated stock trading

Speech recognition applications detect human voice and convert it into text in order to analyze it and then execute commands.

Speech regognition

Speech recognition applications detect human voice and convert it into text in order to analyze it and then execute commands.
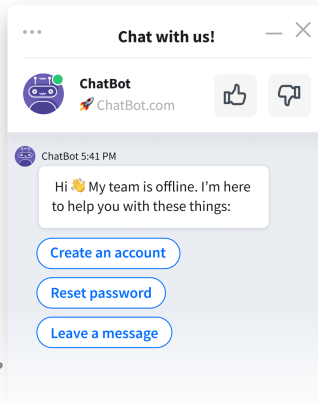

Customer service

Virtual agents are the bots which can help curtomer and answer frequently asked questions.

Virtual agents are the bots which can help curtomer and answer frequently asked questions.
Computer vision

Artificial Intelligence makes decisions based on views from many cameras and information from various sensors.

Computer vision

Artificial Intelligence makes decisions based on views from many cameras and information from various sensors.

[4]

Artificial Intelligence suggests something that might interest you based on your past actions.

Artificial Intelligence suggests something that might interest you based on your past actions.

Automated stock trading

AI algorithms analyze stock market and make transactions based on idicators and charts from the past without human impact.

Automated stock trading

AI algorithms analyze stock market and make transactions based on idicators and charts from the past without human impact.
